

ABSTRACT OF THE DISCLOSURE

A gaming machine is provided, in which the number of parts for securing a decorative panel is small, whereas the decorative panel is easy to attach thereto and detach therefrom. A frame supports a decorative panel from a front face thereof. The frame is detachably attached to a door. The door is provided with support part for supporting the decorative panel from a rear face thereof. In a state where the frame is secured to the door, the decorative panel is held between the frame and the support part.
